

Motorcycle Engine Temperature Operating Range

Then normal operating temperature for a motorcycle engine is about one hundred eighty degrees. The engine operates most efficiently at this temperature as the combustion of the fuel is best achieved at higher temps. +1 vote!

What Are Normal Motorcycle Engine Temperatures?

The engine temp is calibrated with 212 F and idling has an oil temp entry of 140-150 F. So I suppose a temp in range from 140 to 212 F is probably the normal optimal range.". Maybe one of the mechanics or shop people can find more specific info on the 950.

Motorcycle Engine Temperature Operating Range

Answers. Normal operating ENGINE temp is approx 260 degrees Fahrenheit. Exhaust temps run MUCH, MUCH hotter. Exhaust gas temp itself is approx 1300 degrees, by the time it hits the pipes, and the passing by air cools it down, it can still be as hot as 1000 degrees (defined as "skin temp", where coating temps REALLY MATTER) at the header inlet,...

What is the normal operating temperature of my motorcycle ...

Engine temperature can vary greatly in the H-D V-twin motor because it is air cooled and very difficult to regulate. Depending on the model of your bike, normal operating temperature could be anywhere from 200 to 350 degrees. If you are idling it will be on the high end, and if you are cruising, expect it to be in the 250-280 degree range.

Keep in mind that these bikes are air AND OIL cooled. The oil is what keeps the operating parts of the engine at a safe temperature, as well as lubricating them. At the same time, we should note that some of the new turbocharged, water-cooled, auto engines will routinely run oil temps of 325 or more.

The temperature it take to ignite gasoline is 495F. The hottest a two stroke cylinder head should get is 450 degrees continuous running, 500 for short periods. (see graph below) The picture below is of a motorized bicycle that caught on fire after the owner parked it after a ride and some gasoline dripped onto the cylinder head.

The 250 Fi (same engine as my XT250) has an Engine Temp. sensor screwed to the back of the cyl.head, right next to the intake 'rubber'. Adding a small Resistance (in my case 300 ohms) to one of its wires will let the ECU open the injector just a tiny bit longer every time it is activated, giving a richer mixture all through the operating range.

What should the oil temperature be on a Harley Davidson v-twin. I have a 2007 Road Gide and just got one of those cool digital oil temperature thermometers for father;s day. When it is around 90 degrees outside, my oil temperature is around 255 degrees. Is that right, or is that too hot. Since I never had a thermometer before, I have no idea what the engine or oil temperature normally is.

For an engine oil grade you have a combination of the first part (cold temperature performance) and the second part (high temperature performance); e.g. 5W30. When comparing oils, you can say that 0W30, 5W30, or 10W30 all have similar high temperature performance, with a range in cold temperature performance options.
