Notable among inorganic materials are hydrated salts and their multiple applications in the field of solar energy storage. In Chapter 1 of Lane there is an extensive review of phase change materials and especially hydrated salts. Chapter 3 of the same work covers the different types of encapsulation and their compatibility with different materials.

Fig. 1(a) shows a building that is heated in the winter only using solar photovoltaic thermal collector without any air conditioning system. During daytime, air is heated by photovoltaic thermal collectors and the heated air is conveyed to the inside if its temperature is more than indoor temperature, moreover, a part of air thermal energy is stored by PCMs that are located inside the walls to ...

In computational physics, upwind schemes denote a class of numerical discretization methods for solving hyperbolic partial differential equations. Upwind schemes use an adaptive or solution-sensitive finite difference stencil to numerically simulate the direction of propagation of information in a flow field. The upwind schemes attempt to discretize hyperbolic partial differential equations by ...

In physics and engineering, fluid dynamics is a subdiscipline of fluid mechanics that describes the flow of fluids—liquids and gases. It has several subdisciplines, including aerodynamics (the study of air and other gases in motion) and hydrodynamics (the study of liquids in motion). Fluid dynamics has a wide range of applications, including calculating forces and moments on aircraft ...

The Chinese economy began to rebound in Q1, with GDP up 6.4% y/y, flat on Q4 2018. Industrial output was up 6.5% y/y, up 0.8 pps from Q4. Then in March, GDP rose a powerful 8.5% y/y, up 1.4 pps from Q4, to its fastest growth rate since August 2014.
